REG. DESIGN PATENT PENDING.

Effective control of drilling water in Underground mining and tunnelling

Designed to provide a safer drier working environment. The Drill Water Capture System collects and separates the spent drill water from the fines. Captured water is delivered directly to the pump while the fine pieces of coal and rock are discharged onto the ground.

- No moving parts
- Up to 90% of Drill Water Captured
- Reliable alternative to dry or mist Drilling
- Able to handle Hard/Soft/Muddy strata conditions
- 6 different models to suit – AirTracks - Drill Rigs – QDS Bolters and Hand Bolters.
- Keeps operators and work area drier and safer
- Low Maintenance – only two main replacement parts
- Designed for vertical Drilling
- Unit weight < 10 kg
